

UDOFIA, KESIT PATRICK

FULLSTACK WEB & MOBILE DEVELOPER

cleveraph@gmail.com | +234 808 3044 373 | Akwa Ibom, Nigeria — Open to Remote

crsuite.netlify.app | github.com/Raphaelye

PROFESSIONAL SUMMARY

Fullstack Web & Mobile Developer with 4+ years of experience delivering projects end-to-end — from Figma to deployment — across freelance, collaborative, and independent work. Comfortable owning a build solo or contributing within a distributed team, with experience serving clients across Nigeria, the United States, and beyond. Skilled across modern web and mobile stacks, headless CMS integration, and product-level thinking, with a track record of shipping functional, production-ready work. Open to remote freelance engagements and full-time opportunities.

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript, HTML, CSS, Tailwind CSS, jQuery, Framer Motion

Mobile: React Native, Expo, TypeScript

Backend & Data: Node.js, Express.js, MongoDB, Supabase, Convex (BaaS)

CMS: Sanity CMS

Design: Figma, UI/UX Product Design

Languages Spoken: English, Annang (native/local dialect), French (conversational)

FREELANCE & CLIENT EXPERIENCE

Frontend & Fullstack Developer — ACS CD Website *African Congress of Sickle Cell Disease · 2–3 months*

- Independently designed and developed a multi-page website for a government-affiliated health organization, covering organizational information, event registration, and speaker application submissions.
- Built the frontend in React.js with a Node.js and MongoDB backend to manage structured organizational content.
- Integrated Sanity CMS, enabling non-technical staff to manage and update site content independently post-launch.

Frontend Developer (Collaborator) — LeaderVibe *Client: Michael Brown Jr. · 1–2 months*

- Converted Figma designs into a fully responsive production website as part of a collaborative development team.
- Built interactive features allowing visitors to learn about the client's background, book speaking engagements, and purchase products.
- Implemented frontend using HTML, CSS, JavaScript, and jQuery, integrating with an Express.js backend built by fellow collaborators.

Additional contributions to NDA-covered client projects available upon request.

PERSONAL & INDEPENDENT PROJECTS

Recurvo — Subscription Management App *Independent Project · React Native (Expo), TypeScript*

- Designed and built a subscription management app solo, helping users track and manage recurring payments.
- Engineered a resilient subscription-logo resolution system (local asset library → Clearbit API → generated initials fallback) ensuring every entry displays a recognizable identity.

- Designed a proprietary "Subscription Health Score" analytics system, giving users an at-a-glance view of their overall subscription habits.
- Developed a complete freemium business model (Pro tier at \$4.99/month) to position the app for future launch.

Food Empire — Restaurant Ordering Landing Page *Independent Demo Project*

- Solo-designed and built a restaurant landing page with live ordering functionality within a 2–3 week timeframe.
- Implemented smooth, interactive UI animations using Framer Motion to elevate the ordering experience.
- Integrated Supabase for backend data handling and order management.
- Built as an independent proof-of-concept early in freelance career to demonstrate end-to-end design and development proficiency.

EDUCATION

B.Tech, Software Engineering *Federal University of Technology, Ikot Abasi • 2023 – 2028 (Expected)*

Product Design (UI/UX) *TechSphere Academy • 2026 – 2027 (Expected)*

React Native — Bootcamp Course, Udemy

ACHIEVEMENTS

- 1st Position, Robot Design — FIRST Lego League 2022 Edition, hosted by CODERINA (Coders in Africa)
- 3rd Runner-Up, Figma Design Presentation — Digitest Tech Camp
